## About Me

---

I'm a Systems Engineer and full-stack developer with expertise in cloud architecture, backend services, and modern front-end frameworks, proficient in Node.js, TypeScript, Python, React, and key AWS services such as Lambda, EKS, EC2, and DynamoDB. I specialize in API development and data workflows, leveraging PostgreSQL and RDS-proxy for optimized performance, while ensuring robust and secure architecture for scalable, end-to-end solutions. With a commitment to clean, maintainable code, I effectively manage both server-side and client-side demands, continuously expanding my knowledge in cloud-native solutions, microservices, and continuous integration. My proactive, results-driven approach contributes to high-impact applications that deliver significant technical and business value.

## Experience

---

05/2024 - Present

Rimac Seguros y Reaseguros

- Lead the development of backend services that optimize data workflows, integrating with multiple APIs and databases to ensure seamless information flow and robust data integrity.
- Implemented AWS-based infrastructure and services, reducing operational costs and enhancing scalability to support high transaction volumes.
- Collaborated closely with cross-functional teams to align technical solutions with business objectives, contributing to streamlined operations and improved user satisfaction.
- Enhanced system monitoring and observability for critical applications, resulting in increased uptime and faster response to incidents, directly impacting business continuity.

10/2023 - 05/2024

Indra

- Developed and optimized backend services, enhancing system efficiency and enabling smooth integration with external systems and APIs.
- Collaborated with Rimac Seguros teams to design and implement solutions that addressed specific client needs, ensuring alignment with business processes and technical standards.
- Led efforts to improve system stability and performance, contributing to a streamlined user experience and reduced response times across key applications.
- Provided technical guidance and support for junior developers, fostering a collaborative environment that emphasized quality and efficiency.

09/2022 - 09/2023

Tata Consultancy Services

- Developed and integrated REST and SOAP services for comprehensive cloud (AWS) and on-premise solutions, ensuring seamless data exchange and service interoperability.
- Built scalable backend services with Node.js, Java, and Python, complemented by Oracle and PostgreSQL databases for efficient data management.
- Designed and maintained front-end features, enhancing user interfaces to ensure smooth, responsive interactions aligned with La Positiva Seguros' requirements.
- Leveraged AWS (EKS, Lambda, API Gateway, SQS, Step Functions) and Kubernetes to streamline deployments and improve system resilience in production.

## Tata Consultancy Services

- Designed, implemented, and maintained APIs, ensuring high performance and seamless integration within Banco BBVA's systems.
- Utilized AWS services including Lambda, DynamoDB, Step Functions, API Gateway, and Glue to create resilient, cost-effective backend architectures.
- Applied Behavior-Driven Development (BDD) using Gherkin to facilitate clear, maintainable code and improve testing processes.
- Developed solutions with JavaScript, Node.js, and Python, contributing to streamlined operations and enhanced system reliability.

09/2020 – 07/2022

## Copstone

- Developed and maintained backend services using JavaScript and TypeScript with Node.js, optimizing application performance and reliability.
- Executed effective migrations to AWS, utilizing Lambda, API Gateway, IAM, SES, and DynamoDB to support scalable, cloud-based architectures.
- Implemented CI/CD pipelines with GitLabCI, improving deployment efficiency and ensuring consistent, high-quality code releases.
- Applied best practices in cloud management and automation, contributing to enhanced operational stability and streamlined development workflows.
